

Number		
Name	Resident Owner	
Summary	A Resident Owner wants to manage their waste effectively by using the system.	
Priority		
Preconditions	The Resident Owner has an account and access to the Online Garbage Management System.	
Postconditions	The Resident Owner's waste is managed effectively, with payments and collections scheduled and processed.	
Primary Actor(s)		
Secondary Actor(s)		
Trigger	The Resident Owner logs into the system to manage their waste.	
Main Scenario	Step	Action
	1.	The Resident Owner logs into the system.
	2.	They check their account information.
	3.	They sort their waste into bio, plastic, and glass categories.
	4.	The Resident Owner requests a special collection for an item that doesn't fit standard categories.
	5.	The Resident Owner sets waste limits and schedules automatic collections based on their waste levels.
	6.	The Resident Owner receives notifications about their waste limits.
	7.	The Resident Owner makes payments for the services, including fines or monthly fees.
	8.	If recycling waste, the Resident Owner gets profit and sees the refund applied.

Number		
Name	Waste Truck Assistant	
Summary	A Waste Truck Assistant is assigned to collect waste from various residents.	
Priority		
Preconditions	The Waste Truck Assistant is logged into the system and has access to the collection routes.	
Postconditions	The waste is collected efficiently, and the system records and updates the waste collection information.	
Primary Actor(s)		
Secondary Actor(s)		
Trigger	The system assigns the Waste Truck Assistant a new collection route.	
Main Scenario	Step	Action
	1.	The Waste Truck Assistant receives real-time updates on the assigned routes.
	2.	The Waste Truck Assistant optimizes the collection route based on real-time traffic conditions.
	3.	The Waste Truck Assistant scans waste bins to record waste collections.
	4.	The Waste Truck Assistant sends updates to the system after completing collections.

Number		
Name	Technician	
Summary	A Technician needs to maintain and update the waste collection devices.	
Priority		
Preconditions	The Technician has the necessary permissions and access to the system's device management features.	
Postconditions	The devices are maintained, ensuring efficient waste management operations.	
Primary Actor(s)		
Secondary Actor(s)		
Trigger	The system alerts the Technician about a device that requires maintenance.	
Main Scenario	Step	Action
	1.	The Technician logs into the system and checks device health statuses.
	2.	The Technician schedules maintenance or repairs based on device health.
	3.	The Technician updates the firmware on devices as required.

Number		
Name	Waste Management Coordinator	
Summary	A Waste Management Coordinator needs to ensure optimal allocation of resources and smooth operation of waste collection.	
Priority		
Preconditions	The Waste Management Coordinator has access to system reports and resource management tools.	
Postconditions	The waste collection process is optimized, resources are allocated efficiently, and payments are processed.	
Primary Actor(s)		
Secondary Actor(s)		
Trigger	The system generates a report that requires the Waste Management Coordinator's attention.	
Main Scenario	Step	Action
	1.	The Waste Management Coordinator reviews the generated reports.
	2.	The Coordinator analyzes the equipment and vehicle performance.
	3.	The Coordinator plans waste collection routes and allocates resources accordingly.
	4.	The Coordinator handles payment processing and confirms payment statuses.

Number		
Name	Admin	
Summary	An Admin oversees the entire system and ensures that everything operates smoothly.	
Priority		
Preconditions	The Admin has the highest level of access in the system.	
Postconditions	The system is operating efficiently, with all users and processes properly managed.	
Primary Actor(s)		
Secondary Actor(s)		
Trigger	Regular system monitoring or alerts that require administrative action.	
Main Scenario	Step	Action
	1.	The Admin monitors the overall system performance and receives system-wide alerts.
	2.	The Admin manages user permissions and ensures that all roles have the appropriate access.
	3.	The Admin generates statistical reports to analyze the system's performance.
	4.	The Admin oversees the management of processing facilities and ensures service delivery is optimized.
